

LeagueLoch's Operation Overview

Like most people, I have had to scan thousands and thousands of legal case papers in my time. Luckily, my scanner, converts all scans to the pdf format, which makes life easier when it comes to cross linking evidence between documents.

LeagueLoch, will allow you to easily catalogue your legal documents, and to link them to one another, this is achieved by the running of either the RunMe_First.exe, or the DisclaimerAndLoader.exe file !!!!

This will automatically map, your install directory, to the drive letter "R".

When you're creating an in link within a pdf document, you must used the following syntax.

file:///R:/ your_file.pdf#page=?

This will force your pdf viewer to jump to that page number !!!!

LeagueLoch, allows you to create a file summary, which makes it easier to cross reference your legal video evidence, and documents.

You can then create a supporting HTML file, which is to be used to linking your documents together !!!!
